EDUCATION

University at Buffalo, SUNY

Bachelor of Science in Computer Science

Buffalo, New York

Expected May 2027

- **GPA:** 3.6 / 4.0
- **Relevant Coursework:** Web Applications, Applied HCI and Interface Design (React), Data Structures, Algorithms and Complexity, Computer Organization, Systems Programming, Programming Languages

EXPERIENCE

Versana

Software Engineer Intern

New York City

Summer 2026

- Spearheaded the development of a new **/support** page and microservice from scratch, implementing role-based access control and **Azure** infrastructure, and delivering end-to-end full-stack features to clients.
- Contributed to a **CI/CD transformation** initiative, developing **5+ composite GitHub Actions** workflows in YAML that standardized builds across Gradle, Maven, and Yarn — **adopted org-wide** to improve deploy speed and log observability.
- Introduced **Pact contract testing** into the new CI/CD pipeline, authoring reusable templates and documentation to drive adoption **across all services**, catching breaking API changes pre-merge.
- Engineered an **Azure DevOps pipeline** running a Python script that converts Markdown into TipTap JSON and reconciles it into Postgres across multiple environments, cutting manual effort to **under 2 minutes**.

The Barbarian Group

Software Engineer Intern

New York City

Summer 2025

- Shipped **10+ features** for an AI-powered internal tool using Next.js, React, TypeScript, and Tailwind CSS, reducing manual market research time by an estimated **5+ hours per week** for **12+ employees**; deployed via **CI/CD**.
- Resolved **5+ critical bugs** on the company website, improving responsiveness and user experience across all devices.
- Translated **15+ Figma designs** into pixel-perfect UIs, collaborating with design and product stakeholders in Agile sprints to maintain brand alignment across production releases.
- Worked with a 5-person engineering team, contributing through PR/code reviews, paired programming, Jira tickets, and daily cross-functional collaboration with design, strategy, and product.

PROJECTS

Python HTTP Server (Academic Project) | *Python, MongoDB, Docker, Nginx, OpenSSL*

Fall 2025

- Developed a custom HTTP/HTTPS web server in Python from scratch, implementing request parsing with buffering, routing, and response construction from the ground up — validated with **75+ test cases**.
- Engineered auth & security features: bcrypt salted password hashing, **OAuth 2.0** (GitHub), **TOTP**-based 2FA, secure HttpOnly cookies, and HTML escaping.
- Built a real-time chat system with **MongoDB** supporting full message CRUD and user authorization; added **WebSocket**-based real-time features and multipart image/video upload endpoints.
- Configured **Nginx with Docker** for HTTPS with a self-signed TLS certificate via OpenSSL, auto-redirecting HTTP (80) to HTTPS (443).

AI Career Toolkit | *Next.js, JavaScript, Groq API* | [Live Site](#) | [GitHub](#)

Dec 2025 – March 2026

- Built an AI career toolkit in Next.js with Supabase authentication, generating personalized resume feedback and cover letters via the **Groq LLM API**; added a **3 requests/day rate limit** per user to control API costs and prevent abuse.
- Engineered an input pipeline with sanitization and length guards before passing data to the LLM; enforced explicit JSON schema instructions in the system prompt and validated outputs across **50+ test runs** to improve LLM output accuracy.

Spotify Stats Dashboard | *Next.js, JavaScript, NextAuth.js, Spotify API* | [Live Site](#) | [GitHub](#)

July – August 2025

- Built a full-stack analytics dashboard integrating **6+ Spotify API endpoints** to deliver real-time personalized listening insights using Next.js and JavaScript.
- Implemented secure **OAuth 2.0** with **NextAuth.js**; wrote a custom token refresh function and proxied all Spotify API requests through serverless routes to keep access tokens server-side only.

TECHNICAL SKILLS

Languages: Java, Python, TypeScript, JavaScript

Frontend: React, Next.js, Vite, Tailwind CSS

Backend & Cloud: Node.js, Spring Boot, Azure, PostgreSQL, MongoDB, Supabase, REST APIs

Testing: JUnit, Vitest, Mockito, Playwright, Pact (Contract Testing)

DevOps & Tools: Git, GitHub Actions, Docker, Octopus Deploy, CI/CD, Terraform, Maven, Gradle, Vercel
