EDUCATION

University at Buffalo, SUNY

Bachelor of Science in Computer Science

- **GPA:** 3.6 / 4.0
- **Relevant Coursework:** Modern Networking Concepts, Artificial Intelligence, Web Applications, Applied HCI and Interface Design (React), Data Structures, Algorithms and Complexity, Computer Organization

Buffalo, New York

Expected May 2027

EXPERIENCE

Versana

Software Engineer Intern

- Owned the development and deployment of a new support page and **Java** microservice to **production** for client use, implementing database-backed **role-based access control** and provisioning the Azure infrastructure and PostgreSQL database across all environments.
- Built a Python automation script, run through an Azure DevOps pipeline, that converts Markdown into JSON and reconciles it into Postgres across multiple environments, cutting manual effort from hours to **under 2 minutes**.
- Built **5+ reusable composite GitHub Actions** workflows in YAML to standardize builds across Gradle, Maven, and Yarn as part of a CI/CD transformation; adopted org-wide, improving deploy speed, log observability, and test coverage.
- Introduced **Pact contract testing** into the new CI/CD pipeline, authoring reusable templates and documentation for adoption across all services, catching breaking API changes pre-merge.
- Automated **Octopus Deploy** release creation on new Docker image pushes to Azure Container Registry (ACR) using **Terraform**, eliminating manual deployment steps.

New York City

Summer 2026

The Barbarian Group

Software Engineer Intern

- Shipped **10+ features** for an AI-powered internal tool using Next.js, TypeScript, and Supabase, saving **15+ employees** a combined **60+ hours per week** in manual market research.
- Resolved **5+ critical frontend bugs**, including responsive layout issues and rendering inconsistencies, improving UI stability and user experience across devices.
- Partnered cross-functionally with creatives to translate **15+ Figma designs** into responsive, pixel-perfect UIs, maintaining brand consistency across production releases in Agile sprints.

New York City

Summer 2025

PROJECTS

Python HTTP Server (Academic Project) | *Python, MongoDB, Docker, Nginx, OpenSSL*

Fall 2025

- Developed an HTTP/HTTPS web server in Python from scratch, implementing request parsing with buffering, routing, and response construction — validated with **75+ test cases**.
- Engineered auth & security features: bcrypt salted password hashing, **OAuth 2.0** (GitHub), TOTP-based 2FA, secure HttpOnly cookies, and HTML escaping.
- Built a real-time chat system with MongoDB supporting full message CRUD and user authorization; added WebSocket-based real-time features and multipart image/video upload endpoints.
- Configured **Nginx with Docker** for HTTPS with a self-signed TLS certificate via OpenSSL, auto-redirecting HTTP (80) to HTTPS (443).

SWE Career Toolkit | *Next.js, JavaScript, Supabase, Groq API* | [Live Site](#) | [GitHub](#)

Dec 2025 – March 2026

- Built an AI-powered career toolkit using Next.js and Supabase, generating personalized resume feedback and cover letters via the **Groq LLM API**; added a **3 requests/day rate limit** per user to control API costs and prevent abuse.
- Engineered an input pipeline with sanitization and length guards before passing data to the LLM; enforced explicit JSON schema instructions in the system prompt and validated outputs across **50+ test runs** to improve LLM output accuracy.

Spotify Stats Dashboard | *Next.js, JavaScript, NextAuth.js, Spotify API* | [Live Site](#) | [GitHub](#)

July – August 2025

- Built a full-stack analytics dashboard integrating **6+ Spotify API endpoints** to deliver real-time personalized listening insights using Next.js and JavaScript.
- Architected a secure **OAuth 2.0** token lifecycle with **NextAuth.js**, storing tokens in signed **HttpOnly JWT** cookies and auto-refreshing expired tokens via a custom function, with re-authentication fallback on refresh failure.

TECHNICAL SKILLS

Languages: Java, Python, TypeScript, JavaScript, C

Frontend: React, Next.js, Tailwind CSS, Vite

Backend: Spring Boot, Node.js, REST APIs, PostgreSQL, MongoDB, Supabase

Testing: Pact (Contract Testing), Playwright, JUnit, Mockito, Vitest

Tools: Git, Docker, Terraform, Azure, Azure DevOps, GitHub Actions, Octopus Deploy, Vercel
