Education

University at Buffalo, SUNY — Buffalo, New York
Bachelor of Science in Computer Science — *Expected May 2027*

- **GPA:** 3.6 / 4.0
- **Relevant Coursework:** Modern Networking Concepts, Artificial Intelligence, Web Applications, Applied HCI and Interface Design (React), Data Structures, Algorithms and Complexity, Computer Organization

Experience

Versana — New York City
Software Engineer Intern — *Summer 2026*

- Developed and deployed a client-facing support page and **Java Spring Boot** microservice to **production**, implementing PostgreSQL-backed **role-based access control** and provisioning Azure infrastructure across environments.
- Built a Python automation integrated with Azure DevOps to convert Markdown into JSON and reconcile PostgreSQL data across environments, reducing manual processing time from hours to **under 2 minutes**.
- Developed **5+ reusable composite GitHub Actions** workflows for Gradle, Maven, and Yarn builds, adopted organization-wide to standardize CI/CD and improve deployment speed and log observability.
- Introduced **Pact contract testing** into the new CI/CD pipelines, creating reusable templates and documentation that catch breaking API changes before merge.
- Automated **Octopus Deploy** release creation on Docker image pushes to Azure Container Registry (ACR) using Terraform, eliminating manual release steps.

The Barbarian Group — New York City
Software Engineer Intern — *Summer 2025*

- Shipped **10+ features** for an AI-powered internal tool using Next.js, TypeScript, and Supabase, saving **15+ employees** a combined **60+ hours per week** in manual market research.
- Resolved **5+ critical frontend bugs** involving responsive layouts and rendering inconsistencies, improving UI stability across devices.
- Collaborated with creatives to implement **15+ Figma designs** as responsive interfaces across production releases in Agile sprints.

Projects

Python HTTP Server (Academic Project) | *Python, MongoDB, Docker, Nginx, OpenSSL* — Fall 2025

- Built an HTTP/HTTPS web server from scratch in Python, implementing buffered request parsing, routing, and response construction, validated with **75+ test cases**.
- Implemented authentication and security features including bcrypt password hashing, GitHub OAuth 2.0, TOTP-based 2FA, secure HttpOnly cookies, and HTML escaping.
- Developed a MongoDB-backed real-time chat system with message CRUD, user authorization, WebSockets, and multipart image/video uploads.
- Configured Nginx and Docker for HTTPS using a self-signed TLS certificate via OpenSSL, with automatic HTTP-to-HTTPS redirection.

SWE Career Toolkit | *Next.js, JavaScript, Supabase, Groq API* | Live Site | GitHub — Dec 2025 – March 2026

- Built an AI-powered career toolkit using Next.js, Supabase, and the Groq LLM API to generate personalized resume feedback and cover letters, implementing a **3 requests/day** per-user rate limit to control API costs.
- Implemented input sanitization, length validation, and structured JSON output instructions, validating LLM responses across **50+ test runs** to improve output reliability.

Spotify Stats Dashboard | *Next.js, JavaScript, NextAuth.js, Spotify API* | Live Site | GitHub — July – August 2025

- Built a full-stack Spotify analytics dashboard integrating **6+ Spotify API endpoints** to display personalized listening insights using Next.js and JavaScript.
- Implemented secure OAuth 2.0 token management with NextAuth.js, signed HttpOnly JWT cookies, automatic token refresh, and re-authentication fallback on refresh failure.

Technical Skills

Languages: Java, Python, TypeScript, JavaScript, C
Frontend: React, Next.js, Tailwind CSS, Vite
Backend: Spring Boot, Node.js, REST APIs, PostgreSQL, MongoDB, Supabase
Testing: Pact (Contract Testing), Playwright, JUnit, Mockito, Vitest
Tools: Git, Docker, Terraform, Azure, Azure DevOps, GitHub Actions, Octopus Deploy, Vercel
